

EC14 Grounding Clamp for Indoor Electrical Systems

This EC14 grounding clamp is designed for secure grounding in indoor electrical installations. It provides a reliable connection point for grounding conductors, ensuring electrical safety and equipment protection.

Product Overview

Secure Grounding for Indoor Systems

The EC14 series earth clamps are engineered for secure grounding in indoor electrical installations. They provide a reliable connection point for grounding conductors, ensuring optimal electrical safety and equipment protection. Built with durable materials, these clamps offer long-term performance and are suitable for a wide range of indoor electrical applications.

Technical Specifications

Environment

Indoor Use

Key Features

- Durable construction
- Reliable grounding connection
- Equipment protection

Series

EC14

Primary Function

Grounding conductor connection
