Product Overview

The edging power trowel is designed for finishing concrete surfaces, particularly edges and corners.

Professional Edging Concrete Power Trowel

This edging power trowel is a specialized construction machine engineered for finishing and smoothing concrete surfaces, particularly along edges and in confined spaces. Featuring a heavy-weight design for a superior finish and an over-built gearbox for extended service life, it ensures reliability on demanding job sites. With user-focused features like a height-adjustable handle, foldable design for storage, and a centrifugal safety switch, this equipment provides both high performance and operator comfort.

Key Features

Key features include adjustable blade pitch and a compact design for edge work.
