

Electric Actuated Butterfly Valve

This butterfly valve is equipped with an electric actuator for automated operation and remote control. It is designed for industrial applications requiring precise flow control and reliable sealing.

Product Overview

High-Performance Electric Actuated Butterfly Valve

This butterfly valve is engineered for industrial applications that demand high precision in flow control and absolute sealing reliability. The assembly features a robust construction enhanced by a durable epoxy-coated body, ensuring longevity in challenging environments. Integrated with a high-performance electric actuator, it provides seamless automated operation and remote control capabilities, making it an essential component for sophisticated fluid handling systems.

Technical Specifications

Construction Features

- Robust industrial design
- Yellow epoxy-coated body
- Red disc
- Electric actuated operation

Actuation Type

Electric, Automated, Remote Control

Applications

Suitable Applications

Fluid Handling, Industrial Flow Control
