

Electric Aircraft Towing Tractor

This electric aircraft towing tractor is designed for efficient and safe aircraft handling operations. Its electrical system ensures quiet and emission-free operation, making it suitable for indoor and outdoor airport environments.

Overview

Efficient Aircraft Handling

The TB150 electric aircraft tow tractor is engineered for towing small to medium-sized aircraft, including models up to the size of a B767. This energy-saving, emission-free vehicle is designed for both indoor and outdoor airport environments, offering quiet operation without compromising on power. With advanced safety features and an operator-focused cabin, it provides a reliable solution for efficient ground handling operations.

Performance

Towing Capacity Class	B767 and lower weight aircraft
Drive System	Four-wheel drive
Steering Modes	4

Safety & Control

Safety Features

- Visual imaging system
- Excellent operator visibility
- Four-wheel drive for all conditions

Braking Systems	Dual circuit hydraulic brake, Wet disk brake
-----------------	--

Maintenance & Design

Power Source

Electric • Energy Saving • Environment Friendly

Maintenance Design	Easy access to all major components
