

Electric Bicycle Brake Hub Assembly

This brake hub assembly is designed for electric bicycles. It features durable construction with precision-engineered components for reliable braking performance.

Product Overview

High-Performance Brake Hub Assembly

This precision-engineered brake hub assembly is designed specifically for electric bicycles, focusing on reliability and safety. Featuring a robust brake drum and backing plate, the unit ensures efficient heat dissipation and consistent stopping power under various riding conditions. Its durable construction is built for longevity, while the design allows for straightforward installation and maintenance across a wide range of electric bike models.

Technical Specifications

Included Components

- Brake drum
- Backing plate

Maintenance

Easy Installation • Low Maintenance

Part Number

66P4072000TZ-612

Performance Features

Heat Dissipation, Consistent Stopping Power, Durable Construction
