

Electric Bicycle Universal Controller

This universal controller is compatible with both 24V and 36V systems. It is designed for efficient motor control and reliable performance in electric bicycle applications.

Overview

Universal Electric Bicycle Controller

This universal electric bicycle controller is engineered to support both 24V and 36V systems, offering versatile compatibility for a wide range of electric bike models. Designed for reliable performance, it features robust construction and efficient motor control capabilities. Its compact design ensures straightforward integration into various e-bike builds, making it an ideal choice for maintenance or custom projects.

Technical Specifications

Compatibility Features

- Multi-voltage support (24V/36V)
- Wide range of motor types
- Multiple wiring connections

Voltage Compatibility	24V, 36V
Controller Type	Universal Electric Bicycle Controller
