

Electric Bottle Capping Machine

This electric capping machine is designed for tightening and loosening bottle caps. Its adjustable clutch prevents cap damage and ensures consistent sealing for various bottle sizes.

Product Overview

Professional Electric Capping Solution

This electric capping machine is a versatile, portable device engineered for the efficient tightening and loosening of bottle caps. Designed to support small to medium-scale production environments, it significantly enhances capping speed while reducing the physical strain of manual labor. The unit features an adjustable clutch mechanism, which is critical for preventing cap damage and ensuring consistent, reliable sealing across various bottle sizes and cap types.
