

Electric Concrete Vibrator

This electric concrete vibrator is designed to consolidate concrete in construction. It features a flexible shaft and vibrating head for efficient air removal and concrete compaction in various structures.

Product Overview

Professional Concrete Consolidation

This heavy-duty internal concrete vibrator is engineered for high-performance consolidation in demanding construction environments. It features a robust electric motor paired with a flexible shaft and precision vibrating head to effectively remove air pockets and ensure optimal concrete density. Designed for reliability, it is an essential tool for achieving structural integrity in columns, walls, slabs, and various concrete foundations.

Key Features

Ideal Applications

- Concrete Columns
- Retaining Walls
- Floor Slabs
- Structural Foundations

System Components

Electric Motor, Flexible Shaft, Vibrating Head

Performance

Primary Function

Air Removal • Concrete Compaction
