

Electric Control Panel

This electric control panel is designed for power distribution applications. It is suitable for various industrial processes.

Overview

High-Pressure Centrifugal Solution

This horizontal multistage centrifugal pump is engineered for demanding high-pressure industrial applications. Featuring a robust series-impeller design, it delivers consistent discharge pressure suitable for water supply, boiler feed, and pressure boosting. Its durable construction and closed-impeller architecture ensure high efficiency, reduced cavitation, and long-term reliability in critical environments like power plants and chemical facilities.

Technical Specifications

| | |
|----------------|------------------------------------|
| Configuration | Horizontal multistage |
| Impeller Type | Closed impeller |
| Drive Coupling | Directly coupled to electric motor |

Applications

| | |
|----------------------|--|
| Typical Applications | Water supply, Boiler feed, Pressure boosting, Water treatment, Power plants, Chemical processing |
|----------------------|--|
