

Electric Freight Locomotive

This high-power electric locomotive is designed for heavy-haul freight and passenger transport. It features advanced traction control systems and a modular design for easy maintenance, ensuring reliable operation in diverse environmental conditions.

Overview

High-Performance Electric Freight Locomotive

This electric locomotive is engineered for heavy-haul freight and passenger transport, offering robust performance across diverse environmental conditions. It features advanced traction control systems and a modular design, ensuring both reliable operation and ease of maintenance. Built for demanding routes, it delivers high starting tractive effort and utilizes regenerative braking for efficiency, while fully complying with international safety standards.

Technical Specifications

Traction System	Advanced traction control
Braking Type	Regenerative braking
Design Features	Modular Design, Robust Construction, Heavy-Haul Ready

Compliance & Standards

Safety Standards
International Safety Standards
