

Electric Fuel Pump for Auto Engine

High-performance electric fuel pump designed for automotive applications. It is equipped with electrical connectors and fuel inlet/outlet ports for easy installation and reliable fuel delivery to the engine.

Product Overview

High-Performance Fuel Delivery

This electric fuel pump is engineered for reliable performance in automotive engine applications. Featuring a robust cylindrical metal housing and an integrated mounting flange, it ensures durability and ease of installation. It is an ideal solution for upgrading existing systems or replacing worn components to maintain consistent fuel delivery.

Technical Specifications

Installation Features

- Standard electrical connectors
- Dedicated fuel inlet port
- Dedicated fuel outlet port
- Integrated mounting flange

Component Type	Electric Fuel Pump
Construction	Metal Housing, Integrated Plastic Mounting Flange

Performance Metrics

Application Suitability

Automotive • Engine Replacement • System Upgrade
