

Electric Fuel Transfer Pump for Diesel Gasoline Kerosene

This self-priming electric fuel transfer pump is designed for transferring diesel, biodiesel, kerosene, and gasoline. It features a robust motor, durable pump housing, and integrated bypass valve.

Overview

High-Performance Fuel Transfer Solution

This self-priming electric fuel transfer pump is engineered for efficient handling of diesel, biodiesel, kerosene, and gasoline. Built with a robust motor and durable housing, it features an integrated bypass valve to ensure reliable operation across agricultural, construction, and automotive environments. The unit comes fully equipped with essential accessories, including a fuel nozzle, hose, flow meter, and suction strainer for immediate deployment.

Technical Specifications

Power Source	12V DC
Connection Method	Battery Clips
Compatible Fluids	Diesel, Biodiesel, Kerosene, Gasoline

Features

Included Equipment

- Fuel nozzle
- Hose
- Flow meter
- Suction strainer

Key Features

Self-priming • Integrated bypass valve • Robust motor

Applications

Suitable Industries

- Agricultural
- Construction
- Automotive
