

Electric Garden Water Pump

This electric garden water pump is a reliable solution for water transfer applications. It is designed for garden irrigation and water extraction, delivering a consistent flow rate and pressure.

Product Overview

Reliable Garden Water Transfer

The GP-DP garden pump is a robust and efficient solution designed for various water transfer applications, including garden irrigation and water extraction from wells or tanks. Featuring a powerful motor, it delivers consistent flow rates and pressure for both residential and commercial needs. Its compact design and integrated handle ensure easy transport and storage, while built-in thermal overload protection safeguards the motor against damage.

Key Features

Core Features

Thermal Overload Protection, Portable Design, Integrated Handle, Residential & Commercial Use

Technical Specifications

Common Applications

- Garden Irrigation
- Well Water Extraction
- Tank Water Transfer
- General-purpose Pumping

Performance Highlights

1 High

Operational Reliability
