

Electric Golf Cart for Passenger Transport

This electric golf cart is designed to transport passengers and equipment on golf courses and similar environments. It features a four-wheel configuration, a canopy for weather protection and seating for multiple occupants.

Overview

Efficient Passenger Transport

This electric golf cart is engineered for reliable passenger transport across golf courses, resorts, and large private estates. Featuring a robust four-wheel configuration and a protective canopy, it ensures passenger comfort and safety in various outdoor conditions. The electric powertrain offers a quiet, emission-free operation, making it an environmentally friendly solution for professional facility maintenance and guest transportation.
