

# Electric Golf Cart for Recreational Use

This electric golf cart is designed for efficient and quiet transportation on golf courses and in residential communities. It features responsive steering, smooth acceleration, and regenerative braking for enhanced energy efficiency, making it ideal for recreational use and short-distance travel.

## Overview

### Designed for Versatility and Comfort

This electric golf cart is engineered for efficient and quiet transportation across golf courses and residential communities. Featuring a durable chassis and comfortable seating for four, it provides a stable and reliable ride for passengers. With a high-capacity battery system and integrated energy-saving features, it offers a seamless experience for short-distance travel and recreational outings.

## Performance

### Key Performance Features

- High-capacity battery pack for extended range
- Responsive steering system
- Smooth acceleration control
- Regenerative braking for energy efficiency

## Design

Seating Capacity	4 people
Design Specifications	Durable Chassis, Sun-protection Canopy, Quiet Operation

## Applications

### Intended Use

Golf Courses • Residential Communities • Recreational Transport
