

Electric Heated Tray Cabinet Food Dryer

Cabinet dryers are suitable for simultaneous drying of different kinds of polymers in small quantities or for drying materials for trial moulding. They can also be applied in electronic engineering, electroplating, pharmacy, paint baking, and printing industries for preheating or drying related products.

Product Overview

Industrial Cabinet Dryer

This high-performance cabinet dryer is designed for precise, uniform dehydration across various industrial and commercial sectors, including food processing, pharmacy, and electronics. Featuring a stainless steel liner and moveable trays, it ensures contamination-free operation and consistent results. With advanced P.I.D. temperature control and an air-proofed insulated design, this unit maximizes energy efficiency while maintaining strict thermal stability.

Key Features

Operational Highlights

- Accurate P.I.D. temperature control
- Air-proofed insulative door for energy efficiency
- Stainless steel liner and trays
- Adjustable air inlet and exhaust system
- 24-hour programmable timer
- Visible alarm system for troubleshooting

Safety & Compliance

Safety Systems

Overheat protector, Motor overload relay, Automatic power cut-off, Thermal fuse protection

Application Scope

Target Industries

Food Industry • Electronic Engineering • Electroplating • Pharmacy • Printing • Polymer Processing
