

Electric IC and RF Card Reader Writer

This electric read-write card device supports various integrated circuit IC cards, magnetic cards, and RF cards. It includes a self-diagnosis function and can perform card reading, writing, and ejection according to instructions.

Product Overview

Versatile Electric Card Reader/Writer

This electric read-write device is engineered for high-performance integration into self-service terminals, ATMs, and vending machines. It supports a wide range of card types, including integrated circuit (IC) cards, magnetic cards, and RF cards. With built-in self-diagnosis and automated card swallowing capabilities, it provides a reliable solution for secure card data processing in demanding environments.

Technical Specifications

Key Features

- Self-diagnosis function
- Automated card read/write operations
- Card swallow capability
- Robust mechanical drive system
- Durable metal chassis

Supported Card Types	IC Card, Magnetic Card, RF Card
Part Number	52300-4
Revision	01-02

Applications

Common Applications

Self-service Terminals • ATMs • Vending Machines • Multi-media Enquiries
