

Electric Immersion Heater

Electric immersion heaters are designed for heating liquids. They feature robust metal sheaths and come in various shapes and sizes for industrial, commercial, and scientific applications.

Overview

Versatile Electric Immersion Heating Solutions

These electric immersion heaters are engineered for high-performance liquid heating in industrial, commercial, and scientific environments. Constructed with robust metal sheaths, typically stainless steel, they offer durability and resistance to harsh operating conditions. The range includes various shapes and sizes, with options for both direct immersion and secure mounting via threaded fittings to suit diverse application requirements.

Technical Specifications

Suitable Environments

- Industrial settings
- Commercial facilities
- Scientific laboratories

Material Construction

Stainless Steel (Typical)

Mounting Options

Direct Immersion, Threaded Fittings
