

Electric Insect Killer Lamp with UV Light

This electric insect killer lamp attracts and eliminates flying insects. It uses UV light to lure insects, which are then electrocuted by a high-voltage grid.

Overview

Effective Insect Control

The JS30 Electric Insect Killer Lamp utilizes advanced UV light technology to attract and eliminate flying insects like mosquitoes, flies, and moths. Designed for both indoor and outdoor environments, this device provides a chemical-free solution for pest control. Its silent operation and protective cage design ensure safety and convenience, while the removable collection tray makes maintenance quick and easy.

Technical Specifications

Usage Environment

Indoor • Outdoor

Model

JS30

Target Pests

Mosquitoes, Flies, Moths

Features

Key Features

- UV light attraction technology
- High-voltage electrocution grid
- Protective safety cage
- Chemical-free operation
- Silent operation
- Removable collection tray
- Energy-efficient design
