Product Overview

High-Efficiency Heating Element

This electric kettle heating element is engineered for reliable and rapid water heating performance. Constructed with a durable aluminum sheath and high-grade OCr25Al5 resistance wire, it ensures consistent thermal conductivity and longevity. Designed for standard 220V applications, this component is an essential replacement part for maintaining optimal kettle functionality.

Technical Specifications

Power Rating

800 W
Power

Voltage	220 V
Sheath Material	Aluminum
Resistance Wire Type	OCr25Al5

Logistics

Quantity per Carton	30 pcs
