

Electric Metal Polisher with Cylindrical Grinding Attachment

This polisher features a robust electric motor with a cylindrical grinding attachment. The tool is suitable for polishing and grinding applications.

Overview

Professional Electric Metal Polisher

This electric metal polisher is engineered for high-performance grinding and polishing applications. Featuring a robust metal housing, it ensures stability and long-term durability during operation. The included cylindrical grinding attachment with a tapered end allows for precision work on various metal surfaces, making it an essential tool for professional metalworking tasks.

Construction & Design

Housing Material	Durable Metal
Grinding Attachment Type	Cylindrical with Tapered End
Design Features	Robust Motor Housing, Precision Tapered Tip, Stable Construction

Applications

Primary Applications

- Metal Polishing
- Surface Grinding
- Precision Finishing
