

Electric Motor Carbon Brush Replacement

Replacement carbon brush for electric motors. It is manufactured from high-quality carbon materials for durability and optimal performance and includes a pigtail lead with a terminal connector for easy installation.

Product Overview

High-Performance Carbon Brush Replacement

These replacement carbon brushes are engineered to provide reliable electrical contact to an electric motor's commutator, ensuring efficient power transfer and consistent motor operation. Manufactured from high-quality carbon materials, they are designed for durability and long-lasting performance in demanding environments. Each brush features an integrated pigtail lead with a terminal connector, facilitating straightforward installation in a wide variety of power tools and industrial machinery.

Technical Specifications

Material Quality

High-Quality Carbon

Component Type

Electric Motor Carbon Brush

Installation Features

Pigtail Lead, Terminal Connector, Easy Installation

Applications

Suitable Applications

- Electric Motors
- Power Tools
- Industrial Machinery
