

Electric Motor Carbon Brush

Replacement carbon brushes for electric motors. These brushes provide reliable electrical contact with the motor's commutator, ensuring efficient motor operation.

Product Overview

Reliable Motor Performance

These replacement carbon brushes are engineered to establish consistent electrical contact with your motor's commutator, which is essential for maintaining efficient operation. Each unit features a high-quality carbon block integrated with a flexible wire lead and a secure ring terminal for straightforward installation. Designed for durability, these brushes are an ideal maintenance solution for restoring performance in various power tools and electrical appliances.

Technical Specifications

Design Features

- Carbon block construction
- Flexible wire lead
- Ring terminal connection

Component Type	Electric Motor Carbon Brush
Primary Applications	Power Tools, Electrical Appliances, Electric Motors

Maintenance

Usage

Replacement Part • Maintenance Component
