

Electric Motor Carbon Brushes

Replacement carbon brushes designed for electric motors. These brushes provide reliable electrical contact with the motor commutator to ensure efficient power transfer and motor performance.

Product Overview

High-Performance Carbon Brushes

These replacement carbon brushes are engineered for electric motors, providing reliable electrical contact with the commutator for efficient power transfer. Constructed from a durable carbon composition, they are designed to extend the operational lifespan of your equipment. Each unit includes pre-attached wire leads and terminal connectors, ensuring a straightforward and secure installation process for various power tools and electrical machinery.

Technical Specifications

Installation Features

- Attached wire leads
- Terminal connectors included

Material Composition

Durable Carbon

Component Type

Replacement Carbon Brush

Suitable Applications

Electric Motors, Power Tools, Electrical Equipment
