

Electric Motor for General Machinery

This electric motor is designed for general machinery applications. Its durable construction features a finned housing for efficient heat dissipation, ensuring optimal performance and long-lasting operation.

Product Overview

Industrial-Grade Reliability

This electric motor is engineered for high-performance applications across a wide range of general machinery. Featuring a robust finned housing for superior thermal management, the unit ensures consistent heat dissipation during demanding operations. The motor is designed with a durable base for secure mounting and includes an integrated connection box to facilitate safe and efficient electrical installation.

Technical Specifications

Construction	Finned housing for enhanced heat dissipation
Mounting	Integrated sturdy base
Electrical Interface	Included connection box

Application & Features

Ideal Applications

- General Machinery
- Industrial Automation
- Manufacturing Equipment

Key Features	Robust Construction, Thermal Management, Secure Mounting, Industrial Ready
