

# Electric Motor for Metal Forming Machinery

This heavy-duty industrial electric motor features a robust cast metal housing with cooling fins. It is designed for demanding applications in metal forming machinery.

## Product Overview

### Industrial Electric Motor for Metal Forming

This heavy-duty industrial electric motor is engineered specifically for the rigorous demands of metal forming machinery. Featuring a robust cast metal housing designed for optimal durability, the unit incorporates integrated cooling fins to ensure efficient heat dissipation during continuous operation. It is a reliable solution for high-performance industrial applications requiring consistent power output.

## Certifications & Standards

Certifications	ISO 9001:2008, Certificate of Conformity
----------------	--

## Design & Construction

### Primary Application

Metal Forming Machinery • Heavy-Duty Industrial

Housing Material	Cast Metal
Cooling Mechanism	Integrated cooling fins
