

Electric Motor for Mining Machinery

This electric motor is a key component for various types of machinery, especially in mining and construction. Its robust design is suitable for demanding applications like powering rock drilling and piling equipment.

Product Overview

High-Performance Mining Motor

This robust electric motor is engineered specifically for the demanding environments of the mining and construction sectors. Featuring a durable metallic housing with integrated cooling fins, it ensures efficient heat dissipation and sustained reliability during heavy-duty operations. Its design is optimized for power transmission in critical applications such as rock drilling and piling equipment.

Technical Specifications

Design Features

- Metallic housing
- Integrated cooling fins
- Cylindrical body
- Reinforced end shields
- High-torque output shaft
- External electrical connection box

Operational Suitability

Heavy-duty • Demanding Environments • High Heat Dissipation

Primary Applications

Mining Machinery, Construction Equipment, Rock Drilling, Piling Machinery
