

Electric Motor for Packaging Machinery

High-performance electric motor designed for packaging machinery applications. Its compact design allows for easy integration into various packaging systems, powering conveyors, fillers, and sealers.

Overview

High-Performance Packaging Motor

This electric motor is specifically engineered for demanding packaging machinery applications, offering robust construction for long-lasting industrial performance. Its compact design ensures seamless integration into various systems, including conveyors, fillers, and sealers. Featuring a finned housing for superior heat dissipation and a sturdy mounting base, this motor provides reliable and efficient operation in high-paced environments.

Technical Specifications

Housing Design	Finned housing for efficient heat dissipation
Mounting	Sturdy mounting base for secure installation

Applications

Compatible Equipment

- Conveyors
- Fillers
- Sealers
- General Packaging Machinery

Features

Key Features	Compact Design, Heat Dissipation, Robust Construction, Reliable Connection
