

Electric Motor for Textile Machinery

High-efficiency electric motor designed for textile machinery applications. It features a robust construction with cooling fins for optimal thermal management and is enclosed in a durable housing with a terminal box for electrical connections.

Product Overview

High-Efficiency Textile Machinery Motor

This electric motor is specifically engineered for the rigorous demands of textile machinery applications. Featuring a robust, durable housing, it ensures reliable and continuous operation in challenging industrial environments. Integrated cooling fins provide optimal thermal management, extending the motor's lifespan and maintaining peak efficiency during long-term service.

Technical Specifications

Primary Application	Textile Machinery
Cooling Method	Integrated cooling fins
Key Features	Robust construction, Durable housing, Optimal thermal management
Connection Interface	External terminal box

Operational Standards

Operating Mode
Continuous Duty
