Product Overview

High-Performance Jet Water Pump

This electric motor jet water pump is engineered for efficient water transfer and pressure boosting in family homes and clean water applications. Featuring a robust 1.1kW motor and 220V operation, it utilizes a single-stage jet pump mechanism to deliver reliable performance. Its durable construction ensures longevity and consistent water pressure for various residential and light irrigation needs.

Technical Specifications

Power Rating

1.1 kW

Power Output

220 V

Voltage

Pressure Type

High Pressure

Pump Structure

Single-stage

Logistics & Supply

Supply Capacity

5000 pieces per month

Packaging Details

Strong carton packing with export standard

Shipping Port

Ningbo Port

Application & Usage

Recommended Applications

Family Homes, Clean Water, Water Pressure Boosting, Irrigation
