

Electric Passenger Tricycle

This electric tricycle is designed for passenger transport. It features two rows of seating, with a bench seat in the rear and individual seating in the middle section.

Overview

Efficient Passenger Transport

This electric passenger tricycle is designed for reliable short-distance transportation in urban and suburban environments. Featuring a dual-row seating configuration, it comfortably accommodates multiple passengers, making it an ideal solution for shuttle services or local transport needs. The vehicle is equipped with essential safety and convenience features, including front lighting and side mirrors, ensuring a practical and efficient mobility option.
