

Electric Pipe Threading Machine

The electric pipe threading machine is a specialized machine-tool designed for creating threads on pipes and rods. It features a self-centering chuck for secure workpiece holding, a threading die head for precise thread cutting, and a carriage system for smooth and accurate thread advancement.

Product Overview

Professional Pipe Threading Solution

This electric pipe threading machine is a high-performance tool engineered for precision threading on pipes and rods. Featuring a robust silver and red construction, it is built to withstand demanding operational environments. The system integrates a self-centering chuck, a precision die head, and an automated coolant mechanism to ensure consistent, repeatable results and extended tool longevity.

Technical Features

Key Components

- Self-centering chuck for secure workpiece holding
- Precision threading die head
- Carriage system for smooth advancement
- Built-in coolant system

Construction

Robust Build, Silver and Red Finish

Operational Capabilities

Operational Benefits

Repeatable Operations • Friction Reduction • Extended Tool Life

Primary Function

Pipe and rod threading
