

# Electric Polishing Machine for Automotive and Industrial Use

This electric polishing machine is designed for automotive and industrial applications. It features a powerful motor for efficient polishing, variable speed control for different materials, and a comfortable handle for extended use.

## Product Overview

### Professional Polishing Performance

This high-performance electric polishing machine is engineered for both automotive and industrial applications. It features a robust motor designed to deliver consistent results while removing scratches, oxidation, and swirl marks from painted surfaces. With integrated variable speed control and an ergonomic handle, it provides the precision and comfort required for professional extended use.

## Technical Specifications

### Key Performance Metrics

**1 pcs**

Polishing Pad Included

### Core Features

- Variable speed control
- Ergonomic handle design
- High-torque motor
- Suitable for industrial use
- Automotive paint correction capable

## Applications

### Common Applications

Automotive Detailing, Industrial Surface Finishing, Scratch Removal, Oxidation Treatment
