

Electric PTC Tower Heater

This electric tower heater uses PTC technology for efficient heat output. It is designed with a 90-degree oscillation feature to evenly distribute warmth across a room area of 20-30j.

Overview

Efficient PTC Heating Technology

This electric tower heater utilizes advanced Positive Temperature Coefficient (PTC) technology to provide rapid and consistent warmth for indoor spaces. Its sleek, vertical tower design maximizes floor space while ensuring effective heat distribution through a wide front grill. Designed for modern environments, the unit features intuitive top-mounted controls and a stable base for safe, reliable operation.
