

Electric Space Heater with Grille

This electric space heater is designed for household use. It features a circular heating element protected by a metal grille, mounted on a base with integrated control buttons for localized indoor heating.

Product Overview

Efficient Heating Solutions

This electric space heater is engineered for effective localized warming in indoor environments. The unit features a robust circular heating element encased by a protective metal grille and a durable transparent cover. With its stable rectangular base and integrated control interface, it offers a reliable and convenient solution for maintaining comfortable temperatures in targeted areas.
