

Electric Stage Control System

The electric stage control system offers precise positioning and motion control for various industrial applications. It features a dedicated controller unit with a display and intuitive controls, paired with a high-performance stepper motor and stage assembly.

Overview

Precision Motion Control

The WOS-2000 electric stage control system is engineered to provide precise positioning and motion control for demanding industrial applications. This comprehensive solution includes a dedicated controller unit with an integrated display and intuitive interface, paired with a high-performance stepper motor and stage assembly. Designed for reliability and accuracy, it is an ideal choice for automation, robotics, and scientific instrumentation tasks requiring repeatable movements.

Technical Specifications

Core Components

- Dedicated controller unit with display
- High-performance stepper motor
- Stage assembly

System Type

Electric Stage Control System
