

Electric Towel Warmer Radiator

This electric towel radiator is constructed from low carbon steel and finished with a white powder coating. It conforms to EN442 standards for efficient heating.

Product Overview

Professional Heating Solution

This electric towel radiator is precision-engineered from high-quality low carbon steel, featuring a robust white powder coating for durability and aesthetic appeal. Designed for modern bathroom environments, it offers independent heating functionality without relying on existing central heating infrastructure. With strict adherence to EN442 compliance standards, this unit provides reliable and efficient performance for residential and commercial applications.

Technical Specifications

Material	Low carbon steel
Surface Finish	White powder coating

Compliance and Standards

Compliance Standards	EN442
----------------------	-------

Functional Features

Key Benefits

- Independent heating without central system
- Durable low carbon steel construction
- Modern white powder-coated finish
- EN442 certified heating efficiency

Operation Type	Electric
