

Electric Trolling Motor for Small Boats

This electric outboard motor serves as a propulsion system for small boats and watercraft. It features a compact, lightweight design, offering a clean and quiet alternative to gasoline-powered outboards, and includes a tiller handle and propeller.

Product Overview

Clean Propulsion for Small Watercraft

This electric outboard motor serves as a highly efficient and environmentally friendly propulsion system designed specifically for small boats. It offers a quiet, emission-free alternative to traditional gasoline engines, making it ideal for fishing trips and recreational use on dinghies. The compact, lightweight construction ensures that installation and transport are straightforward for any user.
