

Electric Urban Transportation Tricycle

This electric tricycle is designed for urban transportation. It features a compact body, enclosed cabin, and seating for multiple passengers, making it suitable for short-distance travel.

Overview

Electric Urban Transportation Tricycle

This three-wheeled electric vehicle is engineered specifically for efficient urban transportation. Featuring a compact body and a fully enclosed cabin, it provides a protected and comfortable environment for short-distance travel within city limits. With automotive-style controls including a steering wheel, headlights, and side mirrors, it offers a familiar and safe driving experience for city navigation.
