Product Overview

Versatile Precision Cutting

This electric variable speed jig saw is engineered for cutting intricate curves and shapes across wood, non-ferrous metals, and various non-metal materials. Its compact, lightweight design facilitates comfortable one-handed operation, while the optimized balance mechanism significantly reduces machine vibration. Built for reliability, the tool features high-performance transmission components and a high-grade motor capable of handling heavy workloads.

Key Features

Performance Highlights

1 One-handed

Operation Mode

2 Reduced

Vibration Level

Safety & Control

Anti-self-locking switch, Variable speed control, Ergonomic soft grip handle, Dust extraction port

Technical Specifications

Cutting Capabilities

- Adjustable cutting angle
- Bevel cutting support
- Suitable for wood, metal, and plastic

Construction Details

- Compact fuselage design
- High-performance transmission parts
- High-temperature enameled motor wire
- Quick blade change system
