

Electric Vehicle Charging Station

These electric vehicle charging stations are suitable for public or private use. They feature a robust design, a user-friendly interface, standard connectors, and safety features, and they are built to withstand various environmental conditions.

Overview

Professional Charging Solution

This electric vehicle charging station is engineered for both public and private deployment, offering a robust and durable design suitable for various environmental conditions. Featuring a user-friendly interface and standard charging connectors, it ensures efficient and reliable power delivery for electric vehicles. The system is designed with comprehensive safety features and complies with rigorous industry standards, providing a secure charging infrastructure for diverse operational needs.

Technical Specifications

Insurance Coverage

PICC Insured

Key Features

- Robust weather-resistant design
- User-friendly interface
- Standard charging connectors
- Scalable port configurations

Application

Public Use, Private Use

Compliance

Industry Standard Compliant
