

# Electric Water Circulation Pump

This electric pump is designed for water transfer, boosting pressure, and circulation systems. Its compact design allows for easy installation, and the electric motor ensures consistent power delivery.

## Product Overview

### QB Series Performance

The QB Series Electric Pump is engineered for robust performance in water transfer, pressure boosting, and circulation applications. Its compact design facilitates straightforward installation in space-constrained environments while ensuring high efficiency. Equipped with a reliable electric motor and an optimized impeller, this pump balances consistent power delivery with energy-conscious operation, making it a versatile solution for residential, commercial, and industrial utility.

## Key Features

### Key Benefits

- Compact design for confined spaces
- Optimized impeller for flow efficiency
- Durable construction for reliable performance

### Primary Applications

Residential, Commercial, Industrial

## Operational Details

### Operational Modes

Water Transfer • Pressure Boosting • Circulation
