

Electric Water Heater Booster Pump

This electric pump boosts water pressure for water heaters. It is suitable for increasing insufficient water pressure.

Overview

High-Performance Booster Pump

This electric booster pump is engineered to effectively address insufficient water pressure issues in water heater systems. Designed for reliability and durability, it features a robust construction suitable for both residential and light commercial environments. With high-quality materials like stainless steel and brass, it ensures long-term performance and corrosion resistance for clean water applications.

Technical Specifications

Max Liquid Temperature	50 °C
Protection Class	IP54
Insulation Class	B

Materials

Construction Materials

Component	Material
Pump Body	Stainless Steel or Aluminum
Impeller	Brass
Shaft	Stainless Steel

Certifications

Compliance Standards	CE, RoHS, ISO 9001, GS, CCC
