

Electric Water Pressure Booster Pump

This electric pump is designed to boost water pressure in residential and commercial environments. Its durable construction includes a brass pump head and a powerful electric motor for efficient and reliable performance.

Product Overview

GP Series Electric Water Pump

The GP Series Electric Pump is a robust and reliable solution designed for versatile water pressure boosting in both residential and commercial environments. Engineered for efficiency and long-lasting performance, it features a durable brass pump head and a powerful electric motor to ensure a consistent water supply. Its compact design facilitates easy installation, while built-in self-priming capabilities and thermal overload protection enhance overall safety and usability.

Technical Specifications

Safety Features

Thermal Overload Protection • Self-Priming Capability

Construction Materials

Brass Pump Head, Electric Motor

Applications

Primary Applications

- Residential water pressure boosting
- Commercial water pressure boosting
- Water transfer
- Irrigation
- General fluid handling
