

Electric Water Pump

This close-coupled electric water pump is designed for various water pumping applications. Its robust motor housing includes cooling fins for efficient heat dissipation, and it is suitable for residential, commercial, or industrial use, providing reliable water transfer and pressure boosting.

Product Overview

Professional Electric Water Pump

This close-coupled electric water pump is engineered for high-performance water transfer and pressure boosting across residential, commercial, and industrial environments. It features a durable construction with an optimized motor housing that incorporates cooling fins to ensure efficient heat dissipation during operation. The design is focused on reliability and ease of integration, offering standard inlet and outlet ports that simplify connection to existing plumbing systems.

Design & Construction

Cooling Mechanism	Integrated motor housing cooling fins
Configuration	Close-coupled

Application Suitability

Key Capabilities

- Water transfer
- Pressure boosting

Recommended Use	Residential, Commercial, Industrial
-----------------	-------------------------------------
