

Electric Water Pump with Thermal Protection

This electric water pump is equipped with a two-pole induction motor and provides reliable performance for continuous service. It features thermal protection for single-phase operation and is designed for efficient water transfer in residential, commercial, and industrial settings.

Product Overview

Deep Well Self-Priming Solution

This electric water pump is designed for deep well applications, capable of functioning even when the water level is as low as 35 meters below the pump's installation point. It is an extremely reliable and economical solution for automatic water distribution from surge tanks and garden irrigation. Engineered for clean water, this pump offers a robust design suitable for domestic and light commercial use.

Technical Details

Maximum Suction Depth	35 m
Suitable Applications	Domestic Water Supply, Garden Irrigation, Surge Tank Distribution
Fluid Compatibility	Clean water; non-chemically aggressive liquids

Installation & Safety

Installation Environment

- Enclosed environment recommended
- Sheltered from inclement weather
- Above ground installation
- Jet body must be submerged

Safety Features

Thermal Protection • Protective Motor Cover
