

Electric Water Transfer Pump

This high-performance electric pump is designed for water transfer, boosting, and circulation tasks. It is known for its robust construction and reliable operation.

Product Overview

High-Performance Water Transfer Solution

The JET-L Series electric pump is engineered for reliable performance in demanding industrial and general machinery environments. Designed for efficiency, this robust unit is optimized for essential fluid management tasks including water transfer, pressure boosting, and circulation. Its durable construction ensures consistent operation across various professional applications.

Technical Specifications

Design Focus

High-Performance • Robust Construction • Reliable Operation

Application

Industrial, General Machinery, Water Transfer, Boosting, Circulation

Series

JET-L
