

Electric Water Transfer Pump

This electric water transfer pump features a two-pole induction motor and is designed for water transfer applications. It has Class B insulation, IP44 protection, a thermal protector, and is suitable for continuous service.

Product Overview

Efficient Water Transfer Solution

This electric water transfer pump is designed for reliable performance with clean water, making it an ideal choice for domestic water distribution and irrigation systems. It is engineered for economy and ease of use, particularly when paired with small pressure sets for gardens and allotments. For optimal longevity and performance, the unit should be installed in an enclosed environment or a location sheltered from inclement weather.

Technical Specifications

Protection Class

IP44

Model Information

Attribute	Value
Model	HPM60
Design Origin	Germany

Power Rating 0.5 HP

Electrical Input 230 V ~ 50 Hz

Rated Current 2.6 A

Performance Metrics

Performance Highlights

3.3 m³/h

Max Flow Rate

35 m

Max Head

35 °C

Max Temperature

Usage Guidelines

Suitable Applications

Domestic Water Distribution, Garden Irrigation, Pressure Sets, Allotment Watering
