

Electric Water Transfer Pump

High-performance water pump designed for various applications including irrigation, drainage, and water transfer. It features a durable stainless steel pump body and a robust electric motor for reliable operation.

Overview

Professional Water Transfer Solution

This high-performance electric water transfer pump is engineered to provide reliable fluid movement for demanding agricultural and industrial environments. Featuring a durable stainless steel construction, the unit is built to withstand rigorous daily use in irrigation and drainage operations. Its robust electric motor ensures consistent performance, making it an essential tool for professional-grade water management.

Technical Specifications

Primary Applications

- Agricultural irrigation
- Water drainage
- General fluid transfer
