

Electric Wood Planer

The power planer is a handheld woodworking tool designed for smoothing and leveling wood surfaces. It features a high-speed rotating blade that removes thin layers of material with each pass.

Overview

Professional Electric Wood Planer

This high-performance handheld electric wood planer is engineered for precision smoothing and leveling of wood surfaces. Featuring a high-speed rotating blade mechanism, it allows users to remove thin, consistent layers of material with ease. The adjustable depth of cut provides the control necessary for professional tasks such as fitting doors, trimming edges, and preparing surfaces for final finishing.

Technical Specifications

Power Source	Electric Motor
Operation Type	Handheld

Key Features

Ergonomics	Comfortable Grip
Safety Features	Safety Switch, Accidental Operation Prevention

Usage

Common Applications

- Fitting doors
- Trimming edges
- Preparing surfaces for finishing
- Smoothing wood
- Leveling wood

Target User	Professional, DIY Woodworking
